

## Course Overview

The *User Workspace Manager Application Control 10* training course is a 2-day course that provides the necessary foundation to administer and maintain application management using the Desktop Suite. This course contains the subject matter to prepare candidates for the Certified Application Control 10 Administrator exam. Participants may register for course up until 1 business day prior to the course start date. And to optimize the training experience, we recommend students obtain a headset prior to the course start date.

## Course Objectives

- The objective of this workshop is for each student to know the configuration and management principles of Application Control, including
  - Describe the components of the User Workspace Manager
  - Identify the steps in the installation of the User Workspace Manager
  - Explain Deployment Agent installation and configuration
  - Explain Management Center reporting and package deployment
  - Identify the steps in building the configuration
  - Discuss the default configuration, global settings, advanced settings, and features
  - Describe privilege management and its components
  - Explain high availability in a User Workspace Manager environment
  - Discuss network load balancing
  - Identify considerations for the SQL databases
  - Identify the steps in implementing additional Management Center servers
  - Discuss enterprise troubleshooting tips
