

Asset Intelligence 2016

Course Overview

Asset Intelligence is made up of a combination of select features and capabilities inherent to the Management Suite and Data Analytics products. In order to make the most of your Asset Intelligence investment, you will need to develop a fundamental understanding of these two powerful tools and how they contribute to the management of assets in your environment. The Asset Intelligence 2016 Training course does just that – teaches you how to leverage the power of these tools to support discovery of assets, consolidation and normalization of asset data, monitoring of software usage, distribution of needed software and reclamation of unused licenses, and manage inventory. All in the interest of effective asset management.

Course Objectives

By combining classroom training with scenario based hands-on exercises, students are empowered with the practical knowledge and skills needed to effectively administer the Management Suite 2016 environment. You will learn:

- By combining classroom training with scenario based hands-on exercises, students are empowered with the practical knowledge and skills needed to effectively administer the Management Suite 2016 environment. You will learn:
- Core Server concepts
- Console navigation

Course Outline

DAY 1

Overview

- Introduction to Management Suite

Core Server

- Environment
- Configuration
- Certificates
- Activation

Consoles

- Types
- Navigation
- Layout – Groups
- Layout – Custom Columns
- Layout – Fast Find
- Web Console Navigation
- Role Based Administration

Agents

- Configuration
- Deployment

DAY 2

Inventory

- Inventory Scanning Architecture
- Inventory Scanner Agent Configuration
- Software Discovery
- Viewing Software Inventory
- Queries
- Real-time Inventory

Software License Monitoring

- Software Discovery
- Normalizing Software
- Working with Software Licenses

Reporting

- Reporting Module
- Report Types
- Dashboards and Workspaces

Remote Control

- Configuration
- Legacy
- HTML 5

DAY 3

Software Distribution

- Architecture
- Preferred Servers
- Distribution Package
- Delivery
- Self-Organizing Multicast
- Scheduled Tasks
- Portal Management
- Rollout Projects
- Troubleshooting

DAY 4

Data Analytics

- Downloading and Applying Updates to Data Analytics
- Implementing Data Analytics Rules
 - External Rules
 - Internal Rules
 - Forms Rules
- Implementing Discovery Services
- Exploring the Asset Control Database
- Implementing Map Intelligence
- How Data Analytics enhances Software License Monitoring
- Running Reports Using the Executive Report Pack
